

Track Vehicles and Workers with Vericom MRM

Live tracking, satellite map views and dynamic summary reports are just a few of the features available with Vericom MRM and Vericom MRM Plus.

Reliable, complete and easy-to-use

Tracking and managing mobile resources — fleets of vehicles and field workers — is a basic, but critical need for the health of any business. Amid rising labor costs and fluctuating fuel expense, it's no wonder that you may be looking for better ways to manage your assets and cut costs.

Intergis GPS tracking and reporting solutions, Vericom MRM and Vericom MRM Plus, are the simple answer to these important challenges.

“ We have effectively reduced our overtime by 12 – 15 hours per week, saving over \$1,500 per month and \$18,000 per year. Additionally, with better routing, reduced speeding episodes and more timely maintenance, each driver saves a tank of gas per month. ”
- Steve Moon, President Moon Services

Vericom MRM, a Web-based software solution, offers real-time GPS tracking with in-vehicle hardware and handheld devices; dynamic, feature-rich live mapping that shows route details; and customizable, up-to-date reports.

Vericom MRM offers tangible benefits:

- **Gain insight into your operations.** Capture real-time data for improved decision-making.
- **Control costs.** Lower fuel expense, labor costs, mileage, unauthorized vehicle use, and theft or loss.
- **Reduce complexity.** Get easy-to-use, interactive maps and customizable, automated reports to simplify managing mobile resources.
- **Improve worker productivity.** With the latest mapping and reporting technologies, optimize your drivers' schedules and get more done in less time.
- **Decrease risk.** Keep your drivers and vehicles compliant with regulations using report features.
- **Improve customer service.** Arrive at customers' locations on-time, deliver accurate shipments, and eliminate incorrect or fraudulent time and delivery reporting.

Vericom MRM Plus (coming soon) combines routing, scheduling and fleet optimization with GPS tracking and reporting capabilities -- to provide an enhanced level of savings and business efficiencies. If you manually produce routes and schedules today, you can now automate these processes for significant time-savings, reduced costs and improved productivity.

System Features

Vericom
MRM

Real Time GPS Tracking

- Capture and record real time vehicle location and events, such as ignition, stop, idling, speeding, and PTO, door or temperature sensors, and more

Live Mapping and Breadcrumbs

- View your entire fleet in a single map view or filter your map view by group, division, or sub-division
- View breadcrumbs which provide historical information to validate where your vehicles have been
- Quickly find any US street address with the Address Locator

Landmarks and GeoFencing

- Identify landmarks as important or frequently visited locations and group them by customized categories
- Easily import an unlimited number of landmarks
- Define GeoFences or “virtual boundaries” and receive alerts when vehicles enter or exit the areas

Alerts

- Allow users to receive email notifications automatically when vehicle events occur, such as speeding, idling, ignition, PTO, temperature or other sensor events
- Alerts can be set on all vehicles or assigned to individual vehicles

Reports

- View all critical operational information 24/7 in flexible, customizable and dynamic reports including: Fleet Summary, Stop, Idle, Speeding, Detailed Travel Summary, Mileage, Vehicle Maintenance, and more
- Run reports on your entire fleet or specific resources. Generate reports on demand, schedule, print, save, export and email

Dispatch

- Create, import, assign, dispatch and close work orders that are unique to your business processes
- Enable audible turn-by-turn directions and two-way messaging to a Garmin® Personal Navigation Device

Manager and Administrator Tools

- Create and manage groups within the system to reflect geography, shifts, skill sets and more
- Administrators can manage users, passwords and permissions
- Create and assign preventative maintenance service items and thresholds

Additional Features and Solutions

- **Garmin Integration**—Enable real-time audible turn-by-turn navigation and two-way text messaging with drivers
- **Satellite Mapping**—Visualize “off-road” locations such as parking lots, construction sites, and identify details like the front or back of buildings for precise landmarking and GeoFencing
- **Real-time Temperature Sensors**—track and report temperature-controlled environments, significantly reducing the possibility of damaged cargo
- **Door Sensors**—receive notification if a door is opened without authorization or is not closed properly
- **PTO Monitoring**—track Power Take-off (PTO) or second engine activity, and get summary reports for pumping and fuel usage tax credits
